## Envision Solar brings solar home with LifePod™

Envision Solar is proud to introduce the first fully integrated, system-built photovoltaic solar structures for residential, light commercial and light industrial markets worldwide. Now homeowners and small business owners can purchase cost-effective, attractive shade structures to generate clean, renewable solar power! A variety of patent pending LifePod™ models are in development for both grid-tied and off-grid applications and are available for purchase as do-it-yourself kits or for easy assembly by a professional. A solar fitted LifePod™ can provide approximately 25 percent of an average home's electrical needs.

## architects committed to both form and function

Since Envision Solar is born from architects and designers, it should come as no surprise that each product and project is every bit as attractive as it is functional. Appearance and utility are integrated in each design through a full team approach where designers, engineers, contractors and property owners share the same vision: highest quality design, engineering and materials, producing clean energy, beautifully and efficiently.

LifePod™ is engineered to meet international building standards and comes with complete, easy-to-follow instructions. The light gauge steel frame can be clad to match any residence. Professional assistance is only required to connect to the electric grid. The full LifePod™ kit includes all structural and electrical components as well as the solar modules and is designed to make installation easy and educational.

LifePod's™ smaller footprint facilitates greater flexibility in location and can be used for anything from a home office, to a pool house, to a garden or tool shed.

## renewable energy credits and tax rebates make LifePod™ even more affordable

The federal government and many states and local utilities offer rebates and/or tax credits for renewable energy systems that offset substantial portions of the LifePod™ system cost. For more information on these incentives, please visit [www.dsireusa.org](http://www.dsireusa.org).

## LifePod™ enhances the value of your property

Renewable energy generation enhances the resale value of your property. Electricity generated by solar modules slow, stop or even spin your electric meter backwards - reducing energy costs. Even in today's challenging real estate market, "green" home sales remain robust and nothing is more green than a LifePod™!

*For more information and to order your own LifePod™ please visit us at [www.envisionsolar.com](http://www.envisionsolar.com).*

## Envision Solar International, Inc.

Formed in 2006 and based in San Diego, California, Envision Solar was founded by environmental architects who have received numerous design, innovation and environmental awards for their structures.
